

Aviu Solutions

Enterprise Software, Deployed in **Weeks**

— Aviu Solutions Ltd

Custom-Built Solutions

Production-ready business applications engineered from scratch for your unique requirements

Multi-Platform

iOS, web, and desktop applications built with clean architecture and enterprise-grade quality

Accelerated Timeline

Go live in weeks, not months — with zero compromise on quality or functionality

Made with **GAMMA**

About Aviu Solutions

We build production-ready enterprise software for businesses that demand excellence. Every product we deliver is live, deployed, and engineered to handle real-world complexity at scale. From ERP and CRM systems to fully custom platforms, we architect solutions that integrate seamlessly with your existing infrastructure and grow with your business.

Our approach combines speed with enterprise-grade quality. We've successfully delivered five enterprise products with an average go-live time of 5–7 weeks, all 100% cloud-ready and backed by 24/7 technical support. Our vision is to become the global leader in enterprise digital transformation, helping organizations modernize their operations without the traditional timeline and cost barriers.

What We Build

Our engineering team specializes in enterprise platforms that handle complex business operations. Each solution is architected to your specific requirements, with deployment timelines that accelerate your digital transformation.

1

ERP — Enterprise Resource Planning

Complete financial management, inventory, procurement, and operational oversight

Timeline: 5–7 weeks

2

CRM — Customer Relationship Management

Sales pipeline automation, lead tracking, customer analytics, and engagement tools

Timeline: 3–4 weeks

3

HCM — Human Capital Management

Employee records, payroll, benefits administration, performance management, and talent acquisition

Timeline: 4–6 weeks

4

MES — Manufacturing Execution System

Production tracking, quality control, shop floor management, and real-time monitoring

Timeline: 3–5 weeks

5

Custom Applications

Bespoke business applications tailored to unique operational requirements

Timeline: Flexible, based on scope

How We Work

Our proven four-phase methodology ensures quality delivery while maintaining aggressive timelines. Every phase includes clear milestones, stakeholder reviews, and documented sign-offs before proceeding.

01

Discovery & Architecture

Weeks 1–2

Comprehensive requirements gathering, data model design, technical blueprint creation, and architectural sign-off. We map your business processes and define the system architecture before writing a single line of code.

03

Testing & UAT

Weeks 4–5

Quality assurance testing, user acceptance testing with your actual staff, real production data validation, and edge case resolution. We ensure the system works flawlessly in your environment before go-live.

02

Configuration

Weeks 2–4

Business logic implementation, UI/UX design, brand integration, third-party system connections, and workflow automation. We configure the platform to match your operational requirements exactly.

04

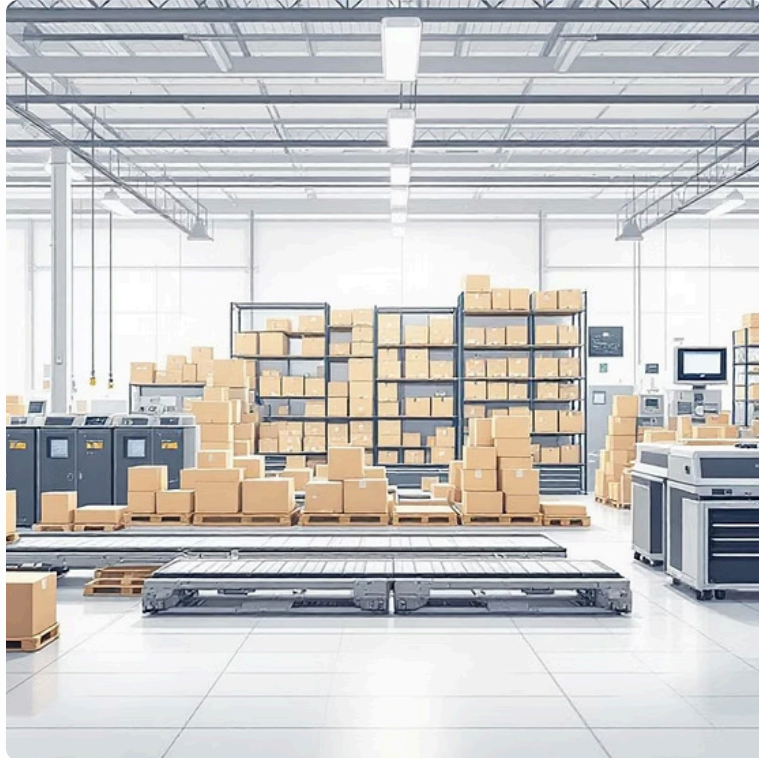

Go-Live

Weeks 5–7

Zero-downtime production cutover, comprehensive user training, 30-day hypercare support agreement, and 24/7 technical assistance. We stand by the system until you're fully confident in operations.

Our Work — Real Production Systems

Every project we deliver is fully deployed and running in production environments — not prototypes or proof-of-concepts. Here are examples of enterprise systems we've successfully implemented.

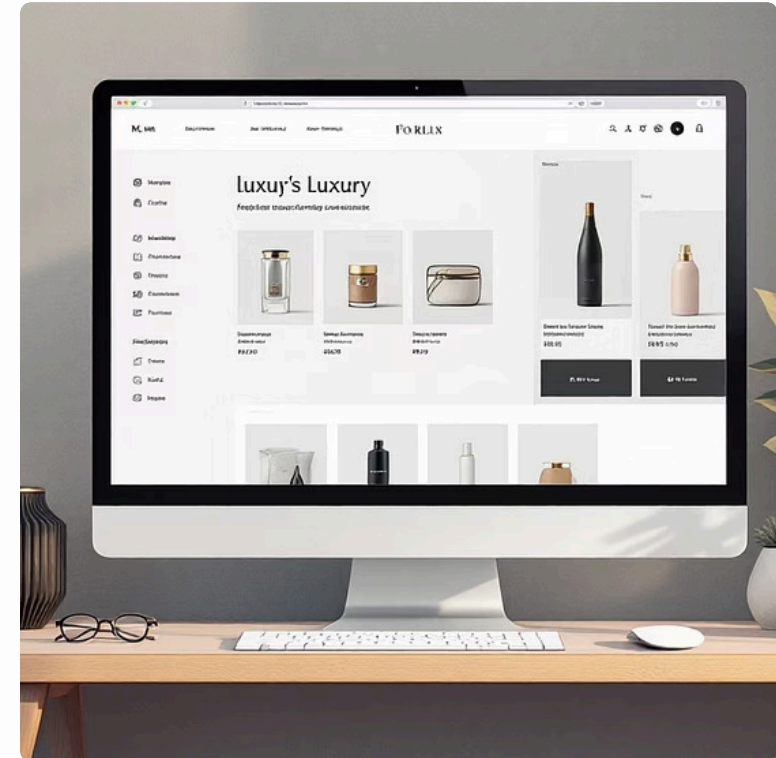

Order-to-Dispatch System

Industry: Print & Manufacturing

Project 1 — Order-to-Dispatch Management System (Print & Manufacturing)

- Built for a print and manufacturing business to manage their entire operation in one place
- Covers the full journey: customer order comes in → stock is checked → purchasing triggered if needed → job sent to production → equipment scheduled → order dispatched
- Eliminated manual handoffs between departments — everything tracked in real time
- Modules: Orders, Stock, Purchasing, Production, Equipment, Dispatch

Glister Luxury E-Commerce

Industry: Retail & Luxury Goods

Project 2 — Glister Luxury E-Commerce Platform

- A complete commerce platform engineered for a premium luxury retail brand
- Built for both customer experience and backend operational scale
- Customers get a high-end, fast, branded shopping experience
- Operations team gets full admin control — orders, inventory, customer data, email automation
- Modules: Frontend, E-Commerce Engine, Authentication, Email Automation, Analytics Dashboard, Admin Panel

"Every project we deliver is fully deployed and running in production — not prototypes or proof-of-concepts."

Why Choose Aviu Solutions?

Speed Without Compromise

Production-grade enterprise software deployed in 5–7 weeks. We achieve accelerated timelines through disciplined architecture and experienced engineering — never sacrificing quality for speed.

Built From Scratch, Your Way

Every solution is engineered specifically for your business. No forcing off-the-shelf software into workflows that don't fit. Your requirements drive the architecture, not the other way around.

Enterprise-Grade Security

SOC 2 certified development practices, cloud-native architecture, compliance-ready design, and built-in security controls. Your data and operations are protected from day one.

Partnership, Not Just Delivery

30-day hypercare support agreement, same-day response SLA, and ongoing partnership. We're committed to your success long after the initial deployment.

Fixed Scope, Fixed Timeline

Clear requirements documented and agreed in writing before development begins. No scope creep, no timeline surprises, no budget overruns. What we promise is what you get.

Senior Engineers on Every Project

You work directly with experienced software architects and engineers throughout the project. No junior developers, no hand-offs to different teams. Consistent expertise from discovery to deployment.

Let's Build Something Together

Ready to accelerate your enterprise digital transformation? We're available for a 15-minute consultation to discuss your specific requirements, timeline, and budget. No pressure, no lengthy sales pitch — just a focused conversation about what you need and how we can deliver it.
