

PROPOSAL

Lead Generation & Outreach Platform

Prepared for: Haim Maymon, Managing Director — Hoze Investments

Prepared by: Karan Modi — Director, Aviu Solutions Ltd

Date: 1 April 2026

Discovery Call: 29 March 2026

Status: Confidential — Prepared exclusively for Hoze Investments

Aviu Solutions Ltd — Registered in England & Wales

SECTION 01

What Is This About?

Right now, finding the right people to reach out to — property owners, developers, people who've just submitted planning applications — is mostly done manually. Someone searches council websites, copies names and addresses into a spreadsheet, and sends emails one by one. It works, but it's slow, inconsistent, and impossible to scale.

This proposal is about replacing that with a system that does it automatically.

The platform we are proposing will:

- Automatically find people who have recently applied for planning permission across UK councils
- Look them up and gather useful details — who they are, whether they own a business, what kind of works they're planning
- Score each lead so your team focuses on the most promising ones first
- Send personalised outreach emails on behalf of Hozea Construction — and separately, Eldorium Finance
- Track every conversation and show you exactly what is working

The end result:

A single system that finds the right people, contacts them at the right time, and tells you which efforts are actually turning into business — running automatically in the background while your team focuses on closing deals.

SECTION 02

The Problem Today

Here is what the current process typically looks like for businesses in your position:

Challenge	Impact
Manual research	Someone has to visit each council's website individually to find new planning applications. This takes hours and still misses a lot.
Disconnected data	Information sits in multiple places — spreadsheets, emails, notes. There is no single picture of who you've contacted and what happened.
No lead prioritisation	Not every planning application is an opportunity. Without a way to filter them, time gets spent on the wrong ones.
Separate brands, same chaos	Running outreach for Hozea Construction and Eldorium Finance from the same tools creates confusion and compliance risk.
No visibility	It's hard to know which channels are generating meetings, which messages are working, and which data sources are actually worth using.

The opportunity:
UK councils receive thousands of planning applications every month. The applicants are exactly the kind of people Hozea Construction wants to speak to — but reaching them quickly and consistently, at scale, requires automation.

SECTION 03

How the System Works

Think of the platform as a machine with five stages. Each stage feeds into the next, and the whole thing runs automatically once it's set up.

The Five Stages at a Glance

Stage 1 — Find: Scanning Planning Portals

Every day, the system visits UK council websites and looks for new planning applications submitted in the last 24 hours. It collects the applicant's name, address, the type of works they have applied for, and the date it was submitted.

This happens automatically — no one needs to do it manually. The results are stored in your database ready for the next stage.

In plain terms:

It's like having someone check every council's planning board every morning and compile a list of everyone who submitted a new application overnight — automatically.

Stage 2 — Enrich: Building a Full Picture

Once an applicant is found, the system automatically looks them up across several sources to build a more complete profile. This happens within minutes of the application being found, without anyone lifting a finger.

Where the additional information comes from:

Source	What We Collect
Council Planning Portal	The original application — name, address, type of works, date submitted
Companies House	If the applicant runs a company, we pull their business details, director history, and how long they've been trading
Property Data Platforms	Who owns the property, how long they've owned it, estimated value, and whether it's a residential or commercial site
LinkedIn	Professional background of the applicant or company director — helps personalise the outreach message

Stage 3 — Score: Finding Your Best Leads

Not every planning application is worth pursuing. Someone applying to replace a garden fence is very different from someone submitting plans for a full house extension or new build. The scoring system automatically ranks every lead so your team knows exactly who to prioritise.

What makes a lead score higher:

Factor	Why It Matters
Type of works applied for	Full extensions, conversions, and new builds score highest. Minor repairs and small changes score lower.
Whether they run a company	A limited company applicant suggests a developer or property investor — higher potential deal value.
Location of the property	Your team defines which postcodes or areas matter most. Leads in those areas score higher automatically.
Size of the project	The system reads the application description and estimates the scale of works involved.
How they respond	If someone opens an email or replies, their score goes up automatically — flagging them as a warm lead.

Your team's time:

Only the highest-scoring leads land in your priority inbox. You can adjust what matters most at any time — no technical knowledge required.

Stage 4 — Outreach: Sending the Right Message

Once a lead is scored and ready, the system automatically sends a personalised outreach email on the correct brand's behalf in a personalised way — either Hozea Construction or Eldorium Finance. The two brands are kept completely separate and never mix.

Feature	How It Works
Hozea Construction	Emails focus on construction delivery — positioning Hozea as the partner who can execute the approved works efficiently and reliably.
Eldorium Finance	Runs its own completely separate campaigns with different email addresses and messaging. Lending is only ever introduced as a secondary option within Hozea outreach, never the primary pitch.
Personalisation	Each email references specific details about the applicant — the type of works they applied for, their location — so it reads as a genuine, relevant message rather than a mass mailshot.
Automatic follow-ups	If there is no reply, the system sends a polite follow-up at the right time. Replies are flagged immediately for your team to respond to.
Compliance built in	Anyone who asks to stop receiving emails is removed instantly and permanently. This is handled automatically in line with UK data protection rules.

Also, generate a ready-to-use draft message based on previous conversations, allowing you to send an email with a single click that can trigger multiple actions tailored to your needs.

Stage 5 — Track: Seeing What's Working

Everything gets recorded. Every email sent, every reply received, every meeting booked, every deal. The dashboard gives you a clear view of the full picture without having to chase anyone for updates.

Dashboard View	What You Can See
Pipeline overview	See at a glance how many leads are at each stage — new, contacted, replied, meeting booked, deal closed — for each brand separately.
Contact history	Click on any contact and see everything: when they were found, what we know about them, every email sent to them, and any notes or documents attached.
Campaign performance	Which messages are getting replies? Which postcodes are responding best? Which data source is generating the most meetings? The dashboard shows you.
Cost tracking	Every external tool or service used by the platform has its cost tracked in real time, broken down by activity. You always know exactly what is being spent and why.
Documents & contracts	Contracts and paperwork can be uploaded and attached directly to a contact or deal record, keeping everything in one place.

SECTION 04

Keeping Hozea & Eldorium Separate

One of the core requirements is that Hozea Construction and Eldorium Finance operate completely independently — separate data, separate emails, separate reporting. Here is exactly how that is enforced:

HOZEA CONSTRUCTION

- Own email address & domain
- Own campaign messages
- Own data & contact records
- Own dashboard & reporting

ELDORIUM FINANCE

- Own email address & domain
- Own campaign messages
- Own data & contact records
- Own dashboard & reporting

On Eldorium Finance outreach:

Lending is only ever introduced as a helpful secondary option at the right point in a Hozea Construction conversation — for example, if a contact expresses interest but mentions budget concerns. It is never the opening message. It is always clearly presented as a separate service.

SECTION 05

What You Get

Everything built as part of this platform belongs entirely to Hoze Investments. There is no monthly licence fee for the platform itself, no dependency on a third-party product that could change its pricing or shut down. You own the code, the data, and the system.

What Is Included	What It Does for You
Your own lead-finding engine	Scans UK planning portals daily and pulls new applicants into your system automatically. Covers as many councils as needed.
Enriched contact profiles	Every lead arrives with a full picture — not just a name and address, but company details, property information, and professional background where available.
Intelligent lead scoring	Leads are ranked automatically so your team always knows who to focus on. The scoring rules are ones you set and can adjust at any time.
Automated email outreach	Personalised emails sent on behalf of the right brand, at the right time, with automatic follow-ups. Your team only steps in when someone replies.
A central dashboard	One place to see every lead, every email, every outcome, and every cost — for both brands, in one login.
Document storage	Contracts and paperwork attached directly to the relevant contact or deal. Searchable and always accessible.
Cost transparency	Every external cost tracked and displayed in real time. You always know exactly what the system is spending.
Existing workflow kept	Your current automated daily email report continues to run. It is extended, not replaced.

SECTION 06

Running Costs

The platform is designed to start at near-zero cost and scale proportionally as your usage grows. The only ongoing costs are for the external services the platform relies on — all of which are industry-standard and paid directly by you with full visibility.

What It Is	What It Does	Estimated Monthly Cost
Data storage & database	Where all your contacts, emails, and documents live	Free to start, ~£20–25/mo as data grows
Automation workflows	The engine that runs everything automatically	~£5–10/mo
Dashboard (web app)	The screen your team logs into to see everything	Free
Data collection tools	Software that reads council portals and LinkedIn	~£30–60/mo
Email sending	Dedicated email addresses for each brand	~£10–40/mo
AI (smart writing & analysis)	Reads application texts, writes personalised email openers, generates daily summaries	~£5–35/mo based on usage

At launch: ~£50–60/month total	At full scale: ~£150–200/month total
--------------------------------	--------------------------------------

On AI costs:
The AI element is used to read planning application text and write personalised email opening lines. Its cost is directly linked to how many leads are processed each month. You can choose which steps use AI — turning it off for lower-value leads reduces cost. All AI spend is tracked and reported monthly in your dashboard.

SECTION 07

Timeline

The platform will be built and delivered in 6–7 weeks from a confirmed start date. Here is how that breaks down:

Phase	What Happens
Weeks 1–2 — Planning	We sit down with your team to finalise which councils to target, what kind of leads to prioritise, and how the two brands' outreach should be structured. Nothing is built until you've agreed the plan in writing.
Weeks 2–3 — Data collection	We build the connection to council planning portals, Companies House, and property data sources. Leads start flowing into your system.
Weeks 3–4 — Lead scoring & enrichment	The scoring engine goes live. Each lead is automatically ranked based on the criteria your team has agreed.
Weeks 4–5 — Outreach setup	Email infrastructure for both brands is configured and warmed up. Automated sequences are built and tested.
Weeks 5–6 — Dashboard	Your team's dashboard is built and connected — pipeline view, contact profiles, campaign analytics, cost tracking, document storage.
Weeks 6–7 — Testing & handover	You test the system on real data and approve it before it goes live. Training is provided for your team. 30-day support period begins.

Our commitment:

You see a working version of the system before it goes fully live. If anything is not right, we fix it before proceeding. Nothing moves forward without your sign-off. 30 days of direct support follows go-live — same day response guaranteed.

SECTION 08

Why Aviu Solutions

Reason	What It Means for You
Built for you, not adapted	This is not an off-the-shelf product with your logo on it. It is built from scratch around your specific requirements, your two brands, and your target market.
You own everything	All of the code, all of the data, and all of the infrastructure belongs to Hoze Investments. No monthly platform licence. No risk of a supplier changing their pricing or shutting down.
One team, start to finish	We handle everything — data collection, the database, the outreach engine, the dashboard, and the AI layer. You deal with one team, not five different agencies.
Live in 6–7 weeks	You will have a working system in your hands in under two months. Not a year-long IT project.
Fixed scope, no surprises	We agree exactly what will be built before we start. There are no hidden extras and no invoices for work you didn't ask for.
Support after launch	We stay with you for 30 days after go-live — same-day response — to make sure everything is running correctly and your team is comfortable using it.

SECTION 09

Next Steps

This proposal covers everything discussed during our call on 29 March 2026. The next step is a short scoping session — a one to two hour conversation — where we finalise the details before anything is built.

Step	What Happens
Step 1 — Review this proposal	Read through, raise any questions. We are happy to walk through anything in more detail.
Step 2 — Scoping session	A focused call to agree which councils to target, scoring criteria, brand messaging, and integration details.
Step 3 — Written agreement	We produce a written document confirming exactly what will be built. Both parties sign before anything starts.
Step 4 — Build begins	Development starts. You receive regular updates throughout.
Step 5 — You review the working system	We present a live, working version of the platform. Your team tests it on real data. You approve it.
Step 6 — Go live	The platform goes live. 30-day support period begins.
